

Appendix E: Comprehensive Active Transportation Project List

Comprehensive Active Transportation Project List

Tables E.2 and E.3 present projects that comprise the GoShasta and City of Redding ATP recommended networks as depicted on maps in Chapter 3 of the Plan. Active transportation projects from each jurisdiction in the Shasta Region are represented in the following table, including projects listed in the city of Redding's Active Transportation Plan (ATP). More information on city of Redding projects, policies, and programs can be found Redding's ATP. The ATPs for the city and the region were developed somewhat independently out of the same planning effort and will move forward together. As the city of Redding updates the project list in its ATP, these changes will automatically be incorporated in the GoShasta plan and the regional transportation plan.

Projects are broken into pedestrian, bicycle, and spot projects by local jurisdiction. Project extents have been established based on a GIS analysis, logical breaks (e.g., major junctions, a change in roadway or right-of-way width) and input from local agency partners and are subject to change based on local needs and scoring criteria for grant funding sources that may be pursued. The Project prioritization scores were established based on a quantitative analysis as described in Appendix D. The scoring rubric for prioritizing projects is also provided below as Table E.1. These scores are general indicators of the benefits a given project may provide (the higher the score, the higher the benefit), however there may be additional benefits or opportunities derived by a particular project that have not been captured in the quantitative analysis, which may override its score. Finally, planning-level cost estimates are included for each project. These estimates include materials for implementing the given project plus other soft costs such as the public/design process, maintenance of traffic (during installation), and contingencies. These costs are intended for general planning and programming purposes only. More accurate projects costs would be developed at the project development phase. A number of projects in the following project lists are "subject to Caltrans process." Please refer to page 51 of the GoShasta Active Transportation Plan for more information on Caltran's project development process.

Table E.1: GoShasta ATP Prioritization Scoring

Factor	Criteria	Measure	Points
Safety			Total Points Possible 40
	Crash analysis¹	Tier 1 - High concentration	20
		Tier 2 - Medium to high concentration	10
		Tier 3 - Medium concentration	5
	Level of Traffic Stress (LOS)²	LTS 4	20
		LTS 3	10
Connectivity (bike projects only)			Total Points Possible 30
	Connects with existing bike facility	Connects with 5 or more existing bike facilities	15
		Connects with any existing bike facilities	10
	Connects with 2 or more proposed bike routes	Connects with 2 or more GoShasta ATP bike routes	5
	Closes a network gap	Closes a gap between two existing bike facilities on the same street	5
	Existing Trunk Lines	Directly connects to the Sacramento River Trail and existing trunk lines	5
Demand			Distance to closest park, transit stop, or school Total Points Possible 45
	Parks	1/2 mile	10

	1 mile	5
Transit stops	1/4 mile from a transit center	10
	1/4 mile from a bus stop	5
School	1/4 mile	10
	1/4-1/2 mile	5
	1/2-3/4 mile	2
Strategic Growth Area (SGA)	Within SGA	15
Equity	Total Points Possible	20
Low Resource Communities³	Within a Low Resource Community	20
WikiMap Feedback	Total Points Possible	10
Supporting comments	Directly refers to a proposed project	10
GRAND TOTAL		145

¹ A kernel density analysis using a half-mile distance band was conducted for bicycle crashes and pedestrian crashes that occurred between 2011 and 2015. Crashes were weighted based on the severity of the most severe injury resulting from the crash. Fatal crashes receive 10 points, serious injuries receive 5 points, minor or possible injury crashes receive 3 points, and no injuries or property damage only receive 1 point. Four tiers are classified using natural breaks with the lowest tier being removed from the analysis.

² A Level of Traffic Stress Analysis (See Appendix A) was conducted. Roads determined to have a level of traffic stress of 3 or 4 are generally considered to be uncomfortable for less experienced bicyclists due to traffic speeds, volumes and existing bicycle facilities (or lack of). These roads were included in the prioritization analysis because they are good candidates for improvements that would make them more safe and comfortable for a larger segment of the population.

³ A Low Resource Community is defined in SRTA's 2015 Regional Transportation Plan (RTP). Low Resource Communities are identified in the Disadvantaged Communities Analysis that was conducted as part of the 2015 RTP. The analysis uses easy to follow socio-economic American Comity Survey Cens data at e Census Block Group level (13 datasets/identifiers) to identify Low Resource Communities. Census Block Groups with 5 or more identifiers are considered Low Resource Communities.
